

VANSH GOSWAMI

Bulandshahr, Uttar Pradesh, India

Phone: 6398017456 | Email: vanshgswamibs2004@gmail.com

LinkedIn: [linkedin.com/in/vansh-goswami-4452b5538](https://www.linkedin.com/in/vansh-goswami-4452b5538)

PROFESSIONAL SUMMARY

Detail-oriented and motivated Computer Science postgraduate student with hands-on experience in Python and Java full-stack development. Strong foundation in data structures, machine learning, and backend development. Proven ability to develop automation tools, APIs, and data-driven solutions. Seeking entry-level or internship opportunities to apply technical skills and contribute to real-world projects.

EDUCATION

Master of Computer Applications (MCA), Computer Science

Galgotias University, Greater Noida | Expected: July 2026

Bachelor of Science (B.Sc.)

Maharaja Agrasen College of Higher Education, Bulandshahr | Aug 2024

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C, JavaScript
- **Frameworks & Tools:** Basic React, Pandas, NumPy
- **Databases:** MySQL, Database Management Systems (DBMS)
- **Technologies:** HTML, CSS
- **Core Concepts:** Data Structures, Machine Learning, Software Development
- **Tools:** Microsoft Excel, MS Word, MS PowerPoint
- **Soft Skills:** Communication and Team Collaboration, Adaptability, Problem-Solving

PROFESSIONAL EXPERIENCE

Python Developer Intern

CODEC | Jul 2025 – Aug 2025

- Developed automation scripts to streamline backend operations.
- Processed and analyzed data using Pandas and NumPy.
- Integrated external APIs for data handling tasks.
- Debugged and improved performance of internal tools.

Java Full Stack Intern

Wipro | Aug 2025 – Oct 2025

- Built and maintained full-stack applications using Java, Spring Boot, HTML, CSS, and SQL.
- Developed RESTful APIs for backend services.
- Optimized database queries for improved application performance.
- Collaborated with development teams on software lifecycle and deployment processes.

PROJECTS

Fake News Detection System (Deep Learning)

- Designed and implemented a deep learning-based text classification system to detect fake news.
- models: Recurrent Neural Networks (RNN), Convolutional Neural Networks (CNN), and Graph Neural Networks (GNN).
- Leveraged BERT (Bidirectional Encoder Representations from Transformers) for contextual text representation and improved classification accuracy.
- Compared model performance using accuracy, on different datasets
- Optimized model performance through hyperparameter tuning and regularization techniques.

Password Generator Application

- Developed a secure password generator using Python.
- Enabled user-defined parameters (length, symbols, digits, uppercase).
- Used Python's secrets module for cryptographic security.
- Implemented entropy-based password strength evaluation.

CERTIFICATIONS & ACHIEVEMENTS

- Data Analyst Certification – Data handling and visualization
- Python Developer Certification – Core Python and automation
- Database Management Certification – SQL and relational concepts
- C Programming Certification – Fundamentals and problem-solving
- Research Paper Publication – A Comprehensive Review on Fake News Detection Using Deep Learning Models
